PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science and Engineering student and full stack developer with hands-on experience building web, mobile, and AI-powered applications using React, Node.js, Java, Python, and Kotlin. Built three end-to-end projects, including an Android security suite with ML-based risk classification and an AI security assistant. Strong foundation in data structures and algorithms. Seeking an entry-level React / Java Full Stack Developer role; open to relocation and remote work.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C++, C, Kotlin

Frontend: React, HTML, CSS, Bootstrap

Backend & Databases: Node.js, SQL, SQLCipher

AI / ML: Machine Learning, LangChain, Generative AI, Gemini 2.5 Pro

Mobile & Security: Android (Kotlin, Jetpack Compose), MVVM, Clean Architecture, AES-256, RSA, Android Keystore, Image Steganography

Tools & Concepts: Git, GitHub, Data Structures and Algorithms

PROJECTS

CyberGuardian | Kotlin, Jetpack Compose, Android, ML, Gemini

- Developed a production-grade Android mobile security suite in Kotlin and Jetpack Compose using Clean Architecture and MVVM, with a glassmorphism/cyberpunk UI.
- Implemented app, Wi-Fi/Bluetooth/NFC, website, SMS, and VPN firewall scanning with ML-based risk classification and real-time security assessment.
- Built an AI security assistant with an offline knowledge-base mode and a Gemini 2.5 Pro cloud mode, plus URL/phishing analysis and password-strength checking.
- Added a biometric Secure Vault using AES-256-GCM, Android Keystore, and SQLCipher, with anti-theft features including wrong-unlock detection and SIM-change alerts.

GitHub: github.com/surja007/CyberGuardian

Multi-Agent Task Orchestrator | Python, LangChain, Gemini 2.5 Pro, Streamlit

- Built a full-stack AI system using LangChain and Gemini 2.5 Pro in which multiple agents collaborate to solve complex tasks.
- Designed a four-agent pipeline (Planner, Retriever, Summarizer, Generator) with real-time progress tracking, execution logs, and visual agent flow.
- Developed an interactive Streamlit web app that accepts PDFs, URLs, and AI-generated data and outputs reports, articles, summaries, and presentations.

GitHub: github.com/surja007/Multi-Agent-Task-Orchestrator

Dual-Layer Security Android Application | Kotlin, AES-256, RSA, LSB Steganography

- Developed an Android app for dual-layer secure communication using AES-256 and RSA encryption with secure key storage.
- Implemented LSB image steganography to hide encrypted data inside images, with capacity checks and no visible distortion.
- Designed an end-to-end secure pipeline (Encrypt, Hide, Extract, Decrypt) that ensures data confidentiality and integrity.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering

2022 – Present

Usha Martin University

Higher Secondary (Class XII)

2020 – 2022

Secondary (Class X)

2019 – 2020

CERTIFICATIONS & TRAINING

Full Stack Development – Ducat India, Delhi

July 2025 – September 2025

Python Bootcamp – LetsUpgrade

June 2025

Generative AI with Data Science – IIT Bhubaneswar

June 2025
